# Provisioning Docker

We need to give SQL Server enough resources to run.

The minimum recommendation is 4GB of RAM and 2CPUs

Get and Run the Docker Container

```
> sudo docker pull microsoft/mssql-server-linux:2017-latest

> docker run -e 'ACCEPT_EULA=Y' -e
'SA_PASSWORD=yourStrong(!)Password' -p 1433:1433 -d microsoft/
mssql-server-linux
```
